Labels:	None		
Original Estimate:	Not Specified		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		

Agile

Epic Name:	Time module

Description

The Time Module automates attendance maintenance and punch in/out.

The functionality of the module allows the employees of the company to create and submit weekly timesheets and the Supervisors to modify, approve and reject the timesheets.

These timesheets are created based on Activities within Projects that are being done for various Customers.

While attendance is tracked through punch in/out employees can specify the time spent of projects assigned to them.

Depending on each user the functions vary.

Epic Link:	Time module

Description

The administrators are able to define the projects, which are managed by the company.

Preconditions: Have an admin user defined.

Requirements: Depending on each Admin, the functions vary: add, cancel, delete projects.

Acceptance criteria:

The functions should be properly displayed in the web page and easily accessible.

The selected options should be applied instantly.

The text should be easily readable, with proper font sizes.

Epic Link:	Time module

Description

Information regarding the functions can be defined, which can be later used for project management activities.

Preconditions: Have an admin user defined.

Requirements: Depending on each user the functions vary:

- Add project information; customers; projects and activities
- View/Edit/Approve/Reject employee timesheets
- View any employee's attendance records

Acceptance criteria:

The functions should be properly displayed in the web page,

The text should be easily readable, with proper font sizes.

Environment

Testing

Description

Verify max accepted chars for CUSTOMER NAME field.

Precondition: Have an admin user defined.

Test steps:

1. Login with admin user
2. Access Menu - Time - Time screen - tab Project info
3. Click on PROJECTS button + ADD project button
4. Project name field - Enter project name
5. Click on ADD customer button to open the "Add customer" pop-up.
6. a Paste a name that has 51 chars into the Customer Name field 6, b Erase 1 char and check the field behavior again

Test data: user: Admin; pass: admin123

Test result:

(a) for 51 chars in Name field - an error is displayed informing the user that maximum 50 chars are accepted
(b) after deleting 1 char the error message is no longer displayed and the user can save the customer

Actual result: the NAME field accepts 51 chars instead of 50.
